Education

Zhejiang University	Electronic Science and Technology	2021.09-2025.06
GPA: 91.69/100 (3.98/4) Rank: 3/91		
Main courses University physics(A)II (98), Development and Practice of Edge Computing(98), Digital Systems(96)		
Introduction to Quantum Information(95) ,Electromagnetic Fields & Waves(94),Fundamentals of Optoelectronics(94)		

Research Experience

Technology for Treatment Based on Vagus Nerve Stimulation (Zhejiang Qizhen Medical & Health Technology Co., Ltd.)		2023.03-2024.06
- Aiming at addressing the current difficulties, inconvenience, and market gaps in domestic brain stroke treatment, attempts are being made to develop a new type of treatment device. - As a hardware technician, I developed upper computer softwares and conducted multiple iterations of the circuit. And I developed programs for various microcontrollers(esp32/stm32), completed the design of the controller, and achieved high-precision stimulation. - Collaborated with Zhejiang University School of Medicine, having done several small animal experiments. - Obtained one patent, presented one conference poster.		
Applications in Smart Grid Networking based on reconfigurable devices like FPGA	Leader	2024.04-2024.08
- Traditional wired transmission cannot meet the growing data transmission demands for IoT, requiring a new interconnect structure. So we introduced the NoC (Network on Chip). - Conducted functional implementation and performance testing on AMD Versal ACAP's NoC (Network on Chip). - Theoretically can reach TB-level transmission speeds, significantly improving the system's overall efficiency.		

Project Experience

Intelligent Agricultural Robot	Hardware/Software Design	2024.02-2024.05
- Interdisciplinary study, attempting to combine information technology and mechanical engineering to solve practical agricultural problems. - As a hardware technician, implemented functionality on embedded microcontrollers (STM32).The project can achieve functions such as bluetooth contorling, radar ranging, and infrared obstacle avoidance. - As a software technician, integrated information from RGB cameras and ultrasonic sensors to achieve object detection and recognition. - Participated in competitions such as the Provincial Mechanical Design Competition, winning several awards.		
X-FOCUS: A Desktop Learning Assistant Based on Nano33	Hardware/Software Design	2023.09– 2023.12
- As a technical member, developed deep learning and image recognition on the Tnano33 platform, and conducted Windows-based GUI development (Vue/Python) for data interaction. - Performed calculations on the microcontroller and output the results to the user terminal, displaying a personalized learning report. - After several iterations and industrial design, the product has demonstrated clear usability		

HONOR

- First Prize in the 6th National Intelligent Robot Creative Design Competition - First Prize in the 8th National Biomedical Engineering Innovation Design Competition - Zhejiang Provincial Government Scholarship, First-Class Scholarship of Zhejiang University (Top 3%) - Dahua Excellence Scholarship, Yongping Scholarship, Outstanding Youth League Member of the University

International Exchange

Tokyo Institute of Technology	computer architecture and VLSI	2024.8-2024.9
- Utilizing a specific instruction set, I implement new functionalities on the existing microprocessor. - Validating the design using FPGA and established connections and communication between multiple processors to achieve system functionality
